

## Geartray Refurbishment & Conversion to LED

A customer brought us a number of gear trays that they wanted converting to LED.

They wanted us to use the existing steelwork and simply remove the T5 Endcaps, ballast and wiring and replace it with LED boards and a driver.

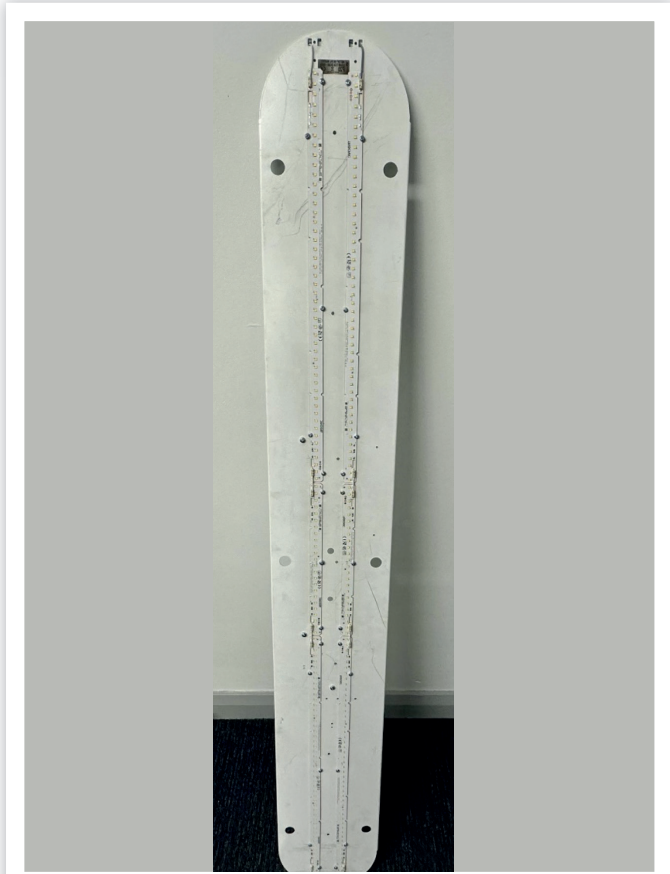

**BEFORE - FRONT VIEW**

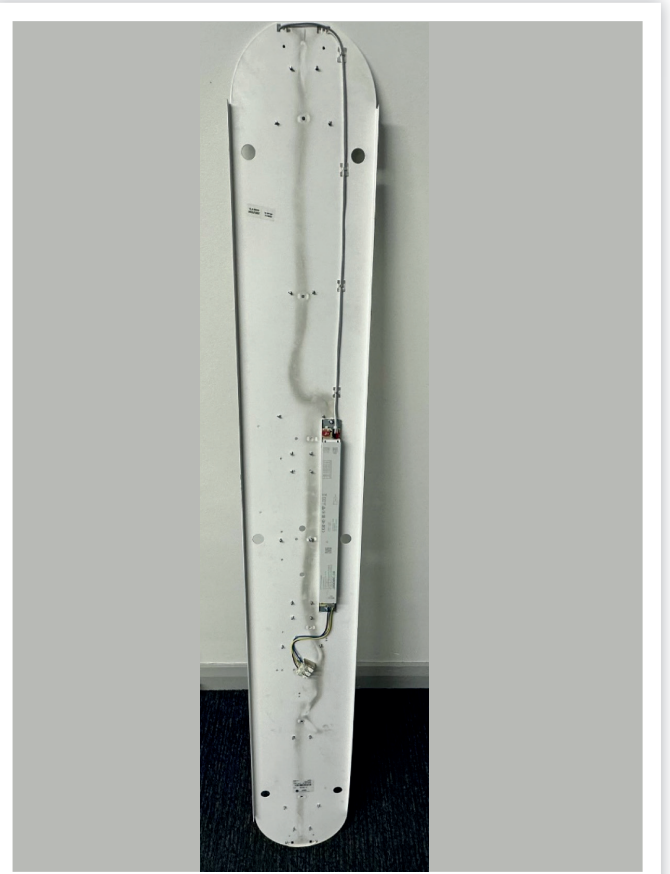

**BEFORE - REAR VIEW**

The steelwork was cleaned up and the old gear removed along with the end caps and wiring. The new LED boards and driver were then installed. We use Tridonic branded components for these jobs as we know we can rely on their quality.

The customer was really pleased with the result, as the fittings are in a difficult to access location and by converting the gear tray's it gives a much simpler and easier option that changing the fittings altogether.
