

Case Study

Utilita Arena Birmingham: lighting improvements for a new bag search area.

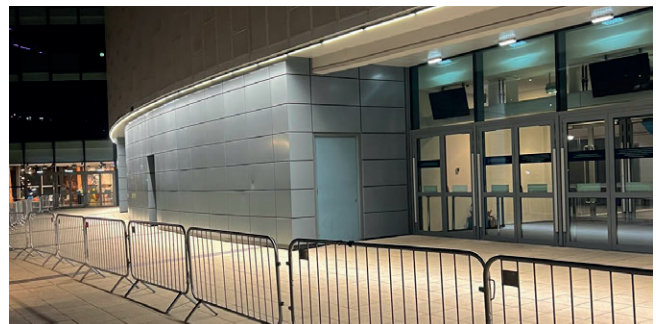

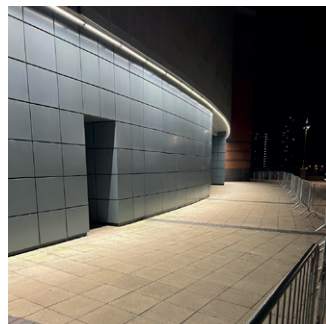

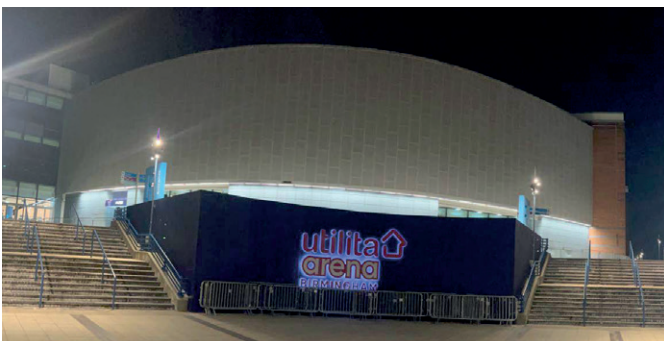

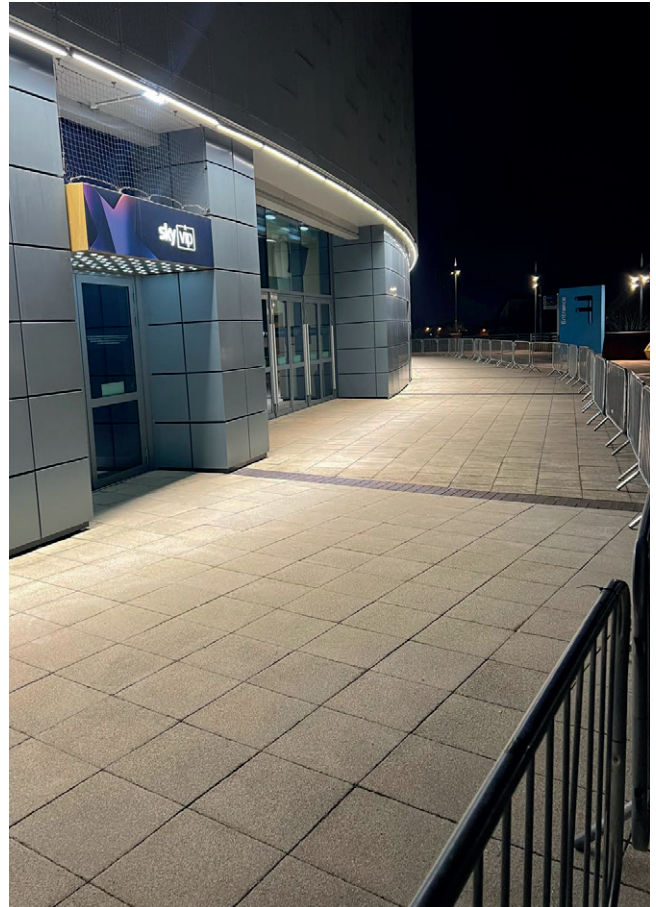

We were contacted by the client and asked to come up with a solution for improving the light level of the walkway for a new bag search area.

The building is curved, and they wanted something that was fairly discreet and would be relatively easy to install. We came up with a solution using a 1.2m linear facade light which can be angled.

The fitting also has the added benefit that it is interconnectable, meaning that upto 10 fittings can be powered from one end. This made the installation much quicker and easier for the contractor.

The end result is fantastic with the lights making a huge difference to the area.

If you're looking to enhance lighting in a challenging space with an efficient and visually appealing solution, get in touch with our team today to see how we can help bring your project to life.
