

Case Study

Aston Villa F.C. - Trinity Road Stand & Player Tunnel Lighting

We partnered with Aston Villa F.C. to deliver a high-quality lighting scheme across the corporate hospitality areas within the prestigious Trinity Road Stand, as well as the player tunnel.

Corporate Boxes & Hospitality Areas

Working to a clear visual brief and defined budget, we designed and supplied a contemporary lighting solution that enhances both comfort and visual appeal.

A combination of discreet downlights and suspended linear fixtures creates a clean, modern aesthetic within each corporate box, complementing the refreshed interior finishes.

In the adjoining corridors, wall-wash downlights highlight curated artwork and photography, while striking geometric ring fixtures add a distinctive design feature.

The main suite benefits from a layered lighting approach, blending downlights with elegant up/down wall luminaires to create a flexible and inviting environment suitable for a range of events.

Player Tunnel Refurbishment 2025/26 Season

With just four weeks before the start of the season, we were commissioned to design and deliver a dynamic lighting concept for the player tunnel and adjacent corridors.

The brief was to create a powerful visual journey from the changing rooms to the pitch. Our solution features continuous recessed linear lighting, forming two parallel lines that guide players along the full 40-metre length of the space.

Using high-output, DALI-dimmable linear systems manufactured in the UK, the installation delivers both performance and control, allowing the atmosphere to be tailored as required.

The Result

A cohesive, modern lighting scheme that enhances both hospitality and performance environments – delivered on time and aligned with the club's vision.

Let's Work Together

Planning a refurbishment or new build? Whether you're working to a tight deadline, a defined budget, or a bold creative vision, we can help bring your lighting scheme to life.
